

# ORB365: ice orb instructions

Follow steps to join in the fun!

Add food coloring to the balloon *before* adding water.

Wrap the balloon's open end around the tap and support the balloon's bottom as it fills with water.

Balloons should be approximately 6-8" in diameter when full.

Tie a knot in the balloons.

Place water balloons *in a single layer* on a tray, bin, tarp, or plate outside until frozen solid.

Ice orbs take about 2-4 days to freeze - if temps are above 32° F, orbs will not freeze.

Insulating orbs with snow or other balloons may extend freezing time. Rotating the balloons after 1-2 days may speed freezing.

Once balloons are frozen deliver frozen them to Barker's Island by the last Thursday in January before the festival. Or request a pick-up!

Join in the festival fun at the Lake Superior Ice Festival and see the Orb365 display!
